MED 671 - Current Topics in Biomedical Research

A general seminar course covering recent advances across the field of biomedical research. Research topics will feature the areas of research being investigated by the graduate students and staff of the department. All graduate students are required to participate and to give a research presentation. Other topics will provide for the acquisition of basic skills and knowledge in biomedical research and will include experimental design, critical review of the literature, communication skills, ethics of experimentation, and career development.

Restricted and mandatory for all graduate students in the Department of Medicine

*Please note: This course is not being offered at this time.
