MED 606 Translational Research Training Program, Module III

The course aim is to recognize the role of biomarkers in clinical research, including early phase trials and clinical care. Principals for the discovery of novel biomarkers at the preclinical and clinical level will be discussed. The syllabus includes a mix of short lectures, debate sessions, one-on-one and group discussions, along with student presentations on topical research oriented questions. This course is designed to align graduate students with the current trends in modern medical training and be effective “translators of discovery and knowledge”. Prerequisite: consent of Department.

Please contact Department for course availability

Prerequisite: Consent of Department.

Instructors: Dr. Evangelos Michelakis, Dr. Gopinath Sutendra, and Dr. Glen Jickling
