ASTS Accredited Transplant Surgery Fellowship-Renal Specific

Academic Accomplishments

Because of the mission as an academic institution, during the two-year training period, transplant surgical fellows at the University of Alberta Hospital will be required to complete a clinical research project with submission of an abstract and final paper to one of the peer-reviewed North American or European surgical journals. Annually the fellows will be expected to review and present clinical outcomes for that year.

In addition, there is an opportunity to work in the laboratories of Dr. Philip Halloran or Dr. Allan Murray on basic research questions.
