ASTS Accredited Transplant Surgery Fellowship-Renal Specific

Medical Renal Transplant Surveillance Clinic

Wednesday 9.00 - 12.00 pm: Transplant Assessment Outpatient Hours
Wednesday 12.00 - 16.00 pm: Transplant Assessment Outpatient Hours

During these session, the transplant fellows are exposed to new referrals or recipients who are regularly followed-up. This experience allows the fellows the opportunity to follow long-term patients, gaining an important perspective on their development, and management of complex issues throughout the patient’s care on an outpatient basis. The fellows are responsible for documentation on patients seen during these office hours. In particular the fellows are responsible for determining a diagnosis, the initial diagnostic work-up, and outlining the treatment plan for the patients. While the attending faculty always reviews the course of treatment and plans with the trainee, the transplant fellow is afforded the opportunity of orchestrating the patient’s care with the help of the transplant organ coordinators.
