ASTS Accredited Transplant Surgery Fellowship-Renal Specific

Pancreas and Combined Kidney and Pancreas Transplant Services

Tuesday 2.00 – 2.00 pm: Surgical Indication Conference.

Multidisciplinary meeting where the surgical attending or transplant fellows present patients referred to the transplant service for consideration of pancreatic transplant.

Wednesday 1 – 2.30 pm (twice/month): Outpatient Office Hours.

During these sessions, the transplant fellows are exposed to new referrals or recipients of a pancreas or combined kidney and pancreas transplant and who are regularly followed-up. This experience allows the fellows the opportunity to follow long term patients, gaining and important perspective on their development, and management of complex issues throughout the patient’s care on an outpatient basis. The fellows are responsible for documentation on patients seen during these office hours. The fellows are responsible for determining a diagnosis, the initial diagnostic workup, and outlining the treatment plan for all patients. While the attending surgeon always reviews the course of treatment and plans with the trainee, the transplant fellow is responsible for orchestrating the patient’s care with the help of the transplant organ coordinators.
