ASTS Accredited Transplant Surgery Fellowship-Renal Specific

Surgical Renal Transplant Assessment Clinic:

Tuesday 8.00 – 12.00 pm: Transplant Assessment Outpatient Hours

During these sessions, the transplant fellows are exposed to new potential recipients. This experience allows the fellows the opportunity to establish long-term patient interaction, gaining a perspective on expectations of outcomes, risk management stratification, assessment and correction of vascular and urinary tract issues pre-operatively and management of complex patients on an outpatient basis. The fellows are responsible for documentation on patients seen during these clinic visits. The fellows are responsible for determining the fitness for surgery, further diagnostic work-up, and outlining a treatment plan for all patients. While the attending surgeon always reviews the course of treatment and plans with the trainee, the transplant fellow will be responsible for orchestrating the needed interventions or investigations prior to listing for transplantation. This will be done with the help of the patient coordinators and transplant urologist’s support staff.
