Advice on Using Non-AH/AHS Information Systems

The use of technology in healthcare is a rapidly emerging field. Many of us already use information systems provided by Alberta Health (AH) or Alberta Health Services (AHS) such as Netcare, eClinician, and IMPAX, to assist with patient care. However, many other healthcare software products (hereafter referred to as information systems), web based and/or apps for personal devices, are also available for use in inpatient and ambulatory care settings. Before using a non-AH/AHS hosted information system that would contain confidential health information, you MUST be aware of important privacy policies and procedures and your responsibility to comply with the Health Information Act and other privacy laws.
