POSTDOCTORAL POSITION IN CARDIOVASCULAR RESEARCH
Dr. Michael Zaugg, Cardiovascular Anesthesia Research Laboratory

Project:
Triglyceride emulsions as a novel therapy against cardiac ischemia-reperfusion injury

In this translational research project, the successful candidate will evaluate the effects of Intralipid® postconditioning on long-term outcomes (remodeling) under different anesthesia regimens in vivo. Infarct size, inflammation, and remodeling following transient coronary artery ligation will be measured in middle-aged male and female rats. These in vivo experiments will also explore potential toxicity (fat embolism) of Intralipid® postconditioning. Contract position is for one year renewable to an additional year, depending on funding availability.

Requirements:
The ideal candidate will be a highly ambitious, self-motivated individual with:
- A PhD degree in a discipline related to cardiovascular research, laboratory medicine, pathobiology, or veterinary science;
- Solid experience in research animal handling (mouse/rat).
- Experience in surgical techniques (transient and permanent coronary artery ligation)
- Excellent written and oral communication skills in English and the ability to work in a collaborative team are essential

To Apply:
Forward your CV, a cover letter that outlines your career objectives and why you are a good fit for the project, and contact information for three references to::
