PROPOSED PRELIMINARY DESIGN RENDERINGS

MATERIALITY

An insulated metal wall system is proposed minimizing the number of joints. This system is considered an all-in-one system with interior finish, insulation and exterior finish all integral to the panels which
- offers a stringent R-value,
- is cost effective, and
- possible to modulate the finishes.

The front-of-house is a combination of
- curtain wall with ceramic frit glazing,
- metal panel,
- wood-look metal wall and soffit panel,
- metal louvre screen at mechanical, and
- vertical entry feature is a translucent glass glad structure lit from within.
