1. Make sure you know the exact program you were admitted to

On your Bear Tracks landing page, scroll down to the “Admissions” heading and click on “Application Status” to see which program you have received Admission for.

2. What courses should you register in?

**BSc General, Physics or Physical Sciences (blend of chemistry and physics) Major:**
Your program outline is available at: [uab.ca/SciGeneralDegree](http://uab.ca/SciGeneralDegree). Select “Admitted Fall 2014 onward”. We recommend you register for the junior core requirements in your first year of study. These 100-level courses are normally the prerequisites for higher level science subjects and can be used towards professional programs.

**BSc Specialization: Astrophysics, Geophysics and Physics**
Locate your program curriculum in our registration guide at [uab.ca/ScienceSpecialization](http://uab.ca/ScienceSpecialization). For the Specialization degrees in Physics you are required to have a course load of at least *24 through the Fall/Winter terms. You must also achieve a minimum 2.3 GPA each year in order to stay in your program and remain in good standing (this is equivalent to a C+ average). Always review the calendar section in the link above in case there are changes.

**BSc Honors: Astrophysics, Geophysics, Mathematical Physics and Physics**

![A minimum of *120 normally taken in no more than five consecutive academic years is required to complete the Honors program for the degree of BSc with Honors. Some departments require that an Honors program be completed in four years, others permit five. See individual departments for details.](http://uab.ca/)

*Honors Physics students must consult an advisor in the Department of Physics regarding their programs. Not all 200-, 300- and 400-level Physics and Geophysics courses are offered every year so students should plan accordingly.

Locate your program curriculum in our registration guide at [uab.ca/ScienceHonors](http://uab.ca/ScienceHonors). For the Honors degrees in Physics you are required to have a course load of at least *24 through the Fall/Winter terms. You must also achieve a minimum 3.0 GPA each year in order to stay in your program and remain in good standing (this is equivalent to a B average). Always review the calendar section in the link above in case there are changes.

*Make sure to follow the curriculum of courses listed for the program you have been admitted to, and read the program requirements carefully.*

3. What courses count as options to fulfill your option requirements for your Physics degree?

<table>
<thead>
<tr>
<th>Arts options</th>
<th>Science options</th>
<th>Outside options</th>
<th>Approved (Pool) options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Courses offered by the Faculty of Arts, these are a diverse range of courses within Humanities, Social Sciences, Fine Arts and Language courses.</td>
<td>Courses offered by the Faculty of Science.</td>
<td>Courses not offered by the Faculty of Science or Arts. These are available to General Science students.</td>
<td>only apply to Specialization &amp; Honors students. These are normally science courses chosen by your department. See the calendar for your list of choices.</td>
</tr>
</tbody>
</table>
4. Tips for creating your ideal timetable.

Create a balanced timetable: Do not register for more than three lab based courses per term as you will have lab assignments and exams in addition to regular course work.

Do not register for a course if you do not have the pre-requisite: Students without the appropriate pre-requisites will be removed from the course. Make sure to read the course description before you register in a course on Bear Tracks.

The class you want is full: If a class is full simply place the class on your watch list (found on Bear Tracks). You will be notified via email or text message when a spot becomes available in the class.

Succeed from the start. If you have questions about how to tackle a paper, report, or exam, how to study or take notes, how to plan your term, or manage a course project, visit the Student Success Centre.

5. Preparing for your degree in Physics

a) Be familiar with computers and programs. Computing (coding) is an important part of our physics degrees and will be incorporated in your first year Honors/Specialization programs. Brush up on Microsoft Excel as well as these programs before September to reduce your learning curve and get a head start:

- **Anaconda Python** (a widely used high-level, general-purpose, interpreted, dynamic programming language, available for free download on the web)
- **Matlab** available through ehub with your CCID

b) Have a solid background in math. Math plays a significant role in a physics degree, review past material to make sure it’s still fresh in your mind. Students majoring/minoring in Physics or in the Honors/Specialization streams must have Physics 30 and Math 31 (or equivalent) to be successful. Consider taking MATH 144 (Calculus for the Physical Sciences) instead of MATH 114 to satisfy your junior core requirement.

c) Use the resources available: A tutorial help centre for all first year Physics courses is available for drop-in assistance in CCIS Building, Room L2-181. The centre normally opens 2 weeks after class starts.

6. Additional assistance

- Honors and Specialization students have their own departmental advisors, please contact them for any questions related to your program: science.ualberta.ca/deptadvisors
- Degree assessments and planning for BSc General students are completed through Student Services: advisor.science@ualberta.ca
- See the Science online step-by-step registration guide: uab.ca/afteryouapply

7. Department of Physics Contact

- For all questions relating to physics courses or registration issues, please email the Department: physugrd@ualberta.ca

For additional questions contact a Faculty Recruiter at science.recruiting@ualberta.ca (while we will not register you in courses, we would be happy to provide assistance and answer your questions).
