Engagement and Routing (Include meeting dates)

Participation: (parties who have seen the proposal and in what capacity)

<For further information see the link posted on the Governance Toolkit section Student Participation Protocol>

Those who have been informed:
- Written update provided to GFC Committee on Learning Environment on October 5, 2016.

Those who have been consulted:
- Members of GFC Committee on Learning Environment on March 1 and January 25, 2017 and on November 2, 2016.

Those who are actively participating:
- Members of CLE
- Members of CLE Sub-committee to Explore Teaching Tenure Stream at University of Alberta:
  - Sarah Forgie (Chair of GFC CLE and Vice-Provost (Learning Initiatives))
  - Fahim Raham (President of the Students’ Union)
  - Roger Graves (formerly Acting Director, Centre for Teaching and Learning)
- Firouz Khodayari (Vice President (Academic), Graduate
Students’ Association
Toni Samek (member of GFC CLE until June 30, 2016 and Professor and Chair at the School of Library and Information Studies)
Rachel Milner (FSO Teaching Professor, Dept. of Biochemistry and member of AASUA until July 1, 2016)
Sourayan Mookerjea (Assoc. Professor, Dept. of Sociology and member of AASUA since July 1, 2016)

Approval Route (Governance) (including meeting dates)

Alignment/Compliance

Alignment with Guiding Documents  
The Institutional Strategic Plan – For the Public Good
Goal: Build a diverse, inclusive community of exceptional students, faculty, and staff from Alberta, Canada, and the world.

Objective: Create a faculty renewal program that builds on the strengths of existing faculty and ensures the sustainable development of the University of Alberta’s talented, highly qualified, and diverse academy.

iii. Strategy: Stabilize long-term investments in contract academic staff by offering career paths that include the possibility of continuing appointments based on demonstrated excellence in teaching.

Compliance with Legislation, Policy and/or Procedure Relevant to the Proposal (please quote legislation and include identifying section numbers)  
GFC Committee on the Learning Environment Terms of Reference (3. Mandate)
“The Committee on the Learning Environment is responsible for making recommendations concerning policy matters and action matters with respect to the following: a) To review and monitor the implementation of the University’s Academic Plan with regard to optimal teaching and an optimal learning environment.
b) To review and, as necessary, recommend to the GFC Academic Planning Committee or the GFC Executive Committee policies on teaching, learning, teaching evaluation, and recognition for teaching that promote the University’s Academic Plan.
c) To review and, as necessary, recommend to the GFC Academic Planning Committee or the GFC Executive Committee policies developed by the Learning Services units to promote the University’s Academic Plan. (GFC 22 SEP 2014)
d) To develop policies that promote ongoing assessment of teaching, learning, and learning services through all Faculties and units. e) To nurture the development of innovative and creative learning services and teaching practices.
f) To encourage the sharing and discussion of evidence about effective teaching, learning, and learning services.
g) To promote critical reflection on the impact of broad societal changes in teaching, learning, and the learning environment.
h) To promote projects with relevant internal and external bodies that offer unique teaching and learning opportunities that would benefit the university community.
i) To consider any matter deemed by the GFC Committee on the Learning Environment to be within the purview of its general
GFC CLE Subcommittee to Explore Teaching Tenure Stream at University of Alberta Terms of Reference (2. Mandate)
The mandate of the subcommittee is to explore the opportunities and challenges for creating a teaching tenure stream at University of Alberta with the goal to enhance quality instruction and learning environment for undergraduate students. To fulfill this mandate the committee will consider undertaking the following activities:

1. Consider the ways creation of teaching tenure stream (accompanied by continuing appoint and job stability, greater professional development opportunities, increased scholarship of teaching and learning, increased support and resources from home department and faculty) will potentially affect the learning environment and quality of instruction available to undergraduate students at University of Alberta.

2. Review teaching tenure stream practices and arrangements at other Canadian peer institutions and research available literature on the issue in Canadian post-secondary landscape (and if need be, at equivalent American public post-secondary context).

1. Attachment 1: White Paper: A Brief Analysis of Arguments For and Against Creation of Teaching-Only Stream, Pg. 1-7
3. Attachment 3: Terms of Reference of GFC CLE Subcommittee to Explore Teaching Tenure Stream at University of Alberta, as approved by CLE on March 2, 2016, Pg 1-6.

Prepared by: Fahim Rahman, President of the Students' Union, fahim.rahman@su.ualberta.ca
A Brief Analysis of Arguments For and Against Creation of Teaching-Only Stream

A Note on the Literature:

Prior to outlining the arguments for and against teaching tenure, it is prudent to note that the majority of this research originates in the United States, and therefore the structure and present state of their post-secondary education (PSE) system is inextricably bound up in many of the conclusions of the papers. While there are some similarities between the Canadian system and the American one, it is safe to say that the American system is more stratified and strained than the Canadian one. Therefore, particularly when looking at teaching outcomes, many of the apparent downsides of hiring teaching-only stream faculty may actually be attributable to systemic chronic-underfunding, rather than shortcomings of the individuals in these positions. For instance, one study mentions that teaching-only faculty are less likely to have office hours on campus, but then recounts a story about an instructor converting a utility closet to an office.¹ Canadian universities are – generally speaking – facing less severe challenges and the issues that appear to plague American contingent instructors would likely be rather foreign to their Canadian counterparts.

Additionally, there is lack of available longitudinal data on how student outcomes have changed before and after the establishment of teaching-stream. This makes conclusively proving that teaching-stream improves student outcomes challenging. However, there is a strong inductive argument that the introduction of tenure, with its benefits of job security and the potential for pedagogical research, will have a positive impact on student outcomes.

Arguments against Teaching Stream:

There are a number of issues that arise when looking at the workability of implementing a teaching stream. Some of which are valuable questions to ask, while other others seem to flow from a philosophical aversion to teaching-intensive positions. A major challenge is, of course, how to develop and implement a teaching-intensive tenure stream, and whether or not that stream should be fully integrated within the traditional tenure system, or rather if it should somehow operate in a separate, yet parallel space. A Council of Ontario Universities (COU) report argues that as long as teaching is valued, rightly or wrongly, less than research, integrating these teaching-intensive roles into the standard tenure system will only perpetuate the bias against those focused primarily on teaching.² While this concern appears somewhat valid, as this issue frequently comes up in interviews with teaching stream faculty, it is likely that

² Leslie Sanders, Teaching Stream Positions: Some Implications (Toronto, 2011).
normalization of teaching-stream faculty, and the likely persistent salary differentiation should serve to partially ameliorate this problem.\(^3\)

The COU also implies that, somehow, a focus on teaching may erode the “robust culture of inquiry in undergraduate education” that should be present on campus.\(^4\) Of the many objections raised by those who oppose the introduction of teaching stream faculty, this one is perhaps the most problematic and persistent. Traditional discourses on the role and structure of the university tend to assume a high degree of complementarity between research and teaching, and on many levels, this relationship appears natural and rational.\(^5\) However, the data on undergraduate education quality presents a more complicated picture. The majority of literature suggests that there is no relationship between quality of research and quality of teaching, and further that both teaching and research intensive faculty are adequately equipped to provide students with both a broad base of knowledge and specific insights into their field.\(^6\) The evolution and rising importance of research productivity at universities has created an incentive structure such that for academics employed in ‘traditional’ roles, research tends to take precedence over teaching and pedagogical research. The introduction of a teaching stream should help mediate these competing interests, and create ‘space’ within a department for the furthering of teaching methods (including scholarship of teaching) without negatively impacting the research productivity of research-focused professors. Further, a more accurate predictor of student learning outcomes seems to be an individual’s employment of certain teaching strategies – strategies that are not, by any means, accessible only to research-focused academics.\(^7\)

There is also the issue of the overall research quality and prestige of an institution, as both are at potentially at risk if the professoriate becomes dominated by individuals not actively engaged in traditional research. While this concern may be valid, there is no real way of addressing it without getting into a larger discussion about the root cause of this issue, university funding. If an institution is being faced with stagnant or shrinking budgets, while also facing growing enrollment, there is no way out of that predicament that does not involve making painful choices. Further, it is unlikely that any major Canadian research institution (particularly U15) is intent on decimating the number of research-focused academics at their school, so the concern about the erosion of prestige seems to be more of a straw man than a substantive concern.

The majority of arguments offered against the creation of teaching stream position are offered by two specific subsets of the academic community. One group is the already privileged set of individuals who have the benefit of tenure and therefore need not be particularly concerned about

\(^{4}\) Sanders, Teaching Stream Positions: Some Implications, 6.

\(^{7}\) R. G. Baldwin and M. R. Wawrzynski, “Contingent Faculty as Teachers: What We Know; What We Need to Know,” American Behavioral Scientist 55, no. 11 (2011): 1501.
their job security, or ability to earn a stable, fair income.⁸ The other group are those who are presently employed in teaching-intensive roles but who would prefer to be employed in a more ‘traditional’, i.e. research-intensive position.⁹ For them, they see the codification and formalization of teaching stream as detrimental, as these roles, viewed by some young academics as transitory, will increasingly become institutionalized and permanent. Both of these objections are problematic, as each group seems to presuppose that every individual within the academic community has, or ought to have, ambitions to carry out intensive research. Obviously, this is not the case, and there a number of instructors at other universities who have spoken to the fact that they prefer and also enjoy teaching. In some cases, the creation of secure, teaching-intensive positions has even drawn professors from other universities, eager to extricate themselves from the “publish-or-die” attitude of more traditional faculty appointments.¹⁰ Even for individuals ‘stuck’ teaching, who would prefer to be employed in a position that involved a greater degree of research, the introduction of job security and retention incentives is most likely preferable to the tumultuous status-quo of being sessional or contract instructors.

There is some literature that suggests that part-time instructors may negatively impact student learning outcomes and retention.¹¹ This concern comes from speculation that part-time faculty are less likely than their full-time, tenured colleagues to understand the campus culture, be familiar with services to support student success and be less willing to engage with students outside the classroom. If this is the case, and that in and of itself is questionable, it strengthens the argument for the adoption of teaching-stream tenure positions, or other means of providing job security and a sense of belonging to contract faculty, as the provision of these benefits will likely increase their connection to the institution and their investment in better understanding the campus and associated services. A large body of research, which holds that job security and job performance are positively correlated, supports this conclusion.¹² A renewed incentive structure and reduced uncertainty makes these sort of productivity-enhancing investments worthwhile for the affected instructors. A study of the impact of instructor status on teaching quality at a large Canadian university found that “there is not a strong correlation between research-focused and teaching-focused college instructors – both have effective and noneffective teachers within each group…instructors do not make a large difference to student achievement”.¹³ These findings

---

⁸ For example, see: Sanders, Teaching Stream Positions: Some Implications.
suggest that stated concern about teaching-intensive faculty eroding the quality of education is vastly overstated. In fact, there is some evidence that suggests teaching-intensive faculty can actually have a positive impact on the quality of education at the undergraduate level.

**Arguments for Teaching Stream:**

There are a number of strong practical, as well as philosophical arguments for the adoption of some form of teaching stream at the University of Alberta. Much of the recent scholarship on teaching quality has consistently found that there is either no difference in educational quality between tenured and contract instructors or, in some cases, that these non-tenured teachers actually improve student success and engagement. A study conducted at Northwestern University found a statistically significant increase in both students’ grades and the likelihood of them taking another class in a field if they took a class taught by an instructor rather than a tenure-track professor. 14 While instructors at Northwestern do not have the benefit of formal teaching stream, Northwestern has pursued a policy of nurturing long-term, secure relationships with their instructors. These are individuals “with benefits, career ladders and job security”—something which could be considered roughly, albeit imperfectly, analogous to tenure. 15

Another study that looked nationally at teaching methods in the United States found that full-time faculty, regardless of whether or not they were tenured, were more likely than their part-time counterparts to employ both learning (essays, presentations and peer assessment) and subject (multiple choice exams, short answer exams) centered approaches to teaching, while part-time faculty was heavily reliant on only subject-centered evaluations. 16 This finding led the researchers to conclude that the most effective allocation of a university’s funds was to focus on ensuring that contingent instructors were offered full-time positions, as by virtue of being full-time, they were more likely to employ a broad, and constructive, array of evaluative methods. 17 It is worth noting here that there was no difference in the methods of research vs. teaching intensive faculty, suggesting that the nature of employment matters more than the individual’s focus.

There is a notable lack of research into the impact of teaching only or contingent faculty on learning outcomes in Canada. The only econometrically sound study of instructor status and perceived educational quality was the aforementioned one which found no statistically-

16 Baldwin and Wawrzynski, “Contingent Faculty as Teachers: What We Know; What We Need to Know,” 1494.
17 Ibid., 1505.
significant relationship; however the authors did find that teaching-focused instructors received a nominally higher score when being assessed on perceived teaching effectiveness.¹⁸

*Teaching Tenure – Policies and Protections*

**American Examples:**

- The American Association of University Professors (AAUP) has an appendix in a major report on teaching stream initiatives which highlights the approaches that different US schools to instituting policies around this new category. Many of the schools listed are publically funded, and are therefore reasonable comparators. Most notably, the Pennsylvania State University system has instituted a formal teacher tenure track, while the University of California system has implemented a system wherein there is no formal tenure, but instructors are granted longer-term contracts and more equitable salaries and benefits.

**Canadian Examples:**

- [University of Manitoba]: According to a cursory review of the 2010-2013 Collective Bargaining Agreement it appears as though the university’s teaching-intensive positions (Instructor/Lecturer designation) are afforded the same benefits as traditional faculty, including the ability to accrue research leave and longer-term contracts. Their salaries, however, are prorated.
- University of Toronto – Lecturer and Senior Lecturer, permanent appointments
- York: Alternate-Stream Appointment
- Waterloo: Continuing Lecturer
- Dalhousie, McMaster, UBC, SFU and the University of Regina all also have similar agreements in place with their instructors and contingent faculty.

*Securing Institutional and Strategic Commitment*

While the aforementioned schools appear to have created these new positions without excessive pushback from faculty, there have been some exceptions, where existing faculty associations have strongly pushed back against the creation of teaching stream stream positions – most notably at the University of Ottawa and University of Windsor.¹⁹ While there is little information available on the specific issues that faculty at these institutions raised, it is reasonable to assume that they were similar to the general arguments against teaching tenure outlined above.

¹⁸ Hoffmann and Oreopoulos, “Professor Qualities and Student Achievement,” 88.
¹⁹ Farr, “For Teaching-Only Faculty, a Controversial Role.”
During discussions at the Committee on the Learning Environment, it was noted that attention should be paid to the name or title given to members in this potential category. For example, at the University of Toronto individuals recruited in both “teaching stream” and ‘traditional stream’ are called professors. Both are referred to as assistant, associate or full professors depending on career stage. Alternatively, at UBC, the teaching stream is referred to as “educational leadership stream” and progression is made from an instructor position, to a senior instruction, and finally a full professor of teaching with tenure. Members of the Committee on the Learning Environment believed that the name/title used to refer to individuals in teaching stream may be significant in ensuring that these members are a valued part of campus, and are regarded similarly, if not equally, for their responsibilities and contribution as traditional professors.

If the University of Alberta were to move forward on this issue, it would be critical to more closely examine the processes that were used with success at York University, the University of Toronto and UBC. It would also be helpful to initiate conversations with the Students’ Unions at these institutions to determine how, if at all, they were included in these discussions.

The Delphi Project on Changing Faculty and Student Success, located the University of Southern California, has developed a number of resources designed at facilitating discussions around the role and status of teaching-intensive faculty members. This includes tracking the paths of successful attempts to address and change the role of these instructors on a number of campuses in the United States. There are, however, no similar studies of Canadian institutions that are readily available.

**Distribution of workload and responsibilities**

- A recent survey report conducted by the FAUW Lecturer Committee indicated:

  "The ratio of the components defining lecturer positions (teaching / research / service) varies greatly. While the most common appointment was 80% teaching / 20% service, a substantial proportion of lecturers (28%) have large service components (50–70%). These service tasks included administrative.

- 70% teaching and remaining spent on research (usually pedagogical) and service (self-reported, see here).

- The current collective bargaining agreement provides a rather lengthy discussion on teaching load, which is based on multiple criteria with complex arrangements based on average teaching loads in different academic units (including at the faculty).

| Criteria for performance review and/or promotion | • Criteria for evaluating teaching for lecturers are no different than that for regular professoriate. However, definite-term lecturers may be promoted to continuing after having served for at least three years.  
• “For those holding definite-term appointments, a recommendation to reappoint at a higher rank shall be considered by the Faculty Tenure and Promotion Committee (FTPC), and requires the approval of the Dean and the VPA&F” (section 2A).  
• In contrast, “Faculty members with Continuing Lecturer appointments are not eligible for tenure or promotion consideration or for sabbatical leave. These positions are understood to be unusual and offered only in special circumstances” (Section 3D). | • “The only common element in the streams (professorial and alternate) is the procedure of evaluation for tenure and promotion” (p.2)  
• Tenure and promotion based on performance (including student evaluation of teaching) and peer review.  
• “Extensive preparation and a large number of contact hours per week in the classroom, laboratory or studio are required of individuals in this stream” (pg. 2)²⁷. | • “Consideration for promotion shall be by a committee within the Member’s Department, School, Library or similar unit, elected by the members of that unit, and by the Chairperson, Head or Director, and professional librarian Members by the Chief Librarian.”  
• “Solid evidence of teaching effectiveness and contribution shall demonstrate a professional commitment to progress as a university teacher and to leadership in university teaching. It may include evidence of mentorship of teaching colleagues, development of new courses, development of innovative teaching aids and techniques and scholarly activity related to pedagogy. It may also include other kinds of scholarly activity if scholarly activity is a requirement of the position set out in the Instructor Member’s letter of appointment or job” | • “Factors that may be considered include: course work and all related activities; supervision of the work of honors and graduate students; participation in seminars and colloquia; innovative methods in teaching and other contributions to the teaching activities of the University. The written opinions of students and/or fellow faculty members shall normally be sought.” |

GFC Committee on the Learning Environment (CLE)

Subcommittee on the Exploring Teaching Tenure Stream at University of Alberta (TTS)

DRAFT TERMS OF REFERENCE

Background

See Attachment 2: Exploring Teaching Tenure Stream at University of Alberta.

Committee Mandate

The mandate of the subcommittee is to review current literature and solicit feedback from those who would be impacted by a teaching tenure stream to address the following question:

How will the learning environment and quality of instruction be impacted by a teaching tenure stream at our campuses, bearing in the mind perceived benefits and consequences of this change to our University’s ability to provide a high quality learning experience for students?

The committee will not recommend how a teaching tenure stream be worded into the Collective Agreement, but will determine what components are required for a teaching tenure stream that best addresses the needs for a high quality learning environment at the University of Alberta.

Committee Composition

- One representative of the Graduate Students’ Association
- One representative of the Students’ Union
- One representative of the Provost’s office
- One representative of Department Chairs
- One representative of Academic Staff
- One representative of the Center for Teaching and Learning
- One representative of the Association of Academic Staff University of Alberta (external to CLE)

Committee Meetings and Timeline

- The subcommittee will meet between March 2016 and October 2016.
- A preliminary report for discussion will be presented at the September 2016 CLE meeting.
- A final report will be submitted at the October 2016 CLE meeting, and if approved go to the November 2016 GFC meeting.

Committee Support

University Governance will provide administrative support.
